

James Miskelly is a local botanist and invertebrate expert who studied at UVic and has extensive knowledge of campus natural areas.

Species	Notes
Carex tumulicola	Known from the side of Gordon Head Road near the camas meadow and a few placed in the woods near ring road. Mapped in the recovery strategy.
Epilobium densiflorum	There's a historical record from somewhere in the centre of campus; probably described in status report.
Psilocarphus elatior	Populations were destroyed in the construction of the University Centre and Cornett Building; probably described in status report. *Not added to species list, likely not present.
Potentilla gracilis var. gracilis	Still present in small numbers in camas meadow area.
Erynnis propertius	One in the oaks along Cedar Hill X Rd once.
Patagioenas fasciata	A flock in the oaks near the alumni meadow once.
Megascops kennicottii	People used to put up boxes in the forest, likely trying to bring them back.
