|---------------------------|--|--------------|
| File name | Southern Vancouver Island Land Cover Classification Including Historical (1800s) Garry Oak Ecosystem Patches - Raster | |
| Date created | August 2020 | |
| Date last updated | August 2020 | |
| Resolution | 30 meters | |
| No data value | 255 | |
| Projection | EPSG:3005 - NAD83 - BC Albers | |
| Data sources | Lea, T. (2002). Terrestrial Information Branch, British Columbia Ministry of Sustainable Resource Management, Victoria, B.C. North American Land Change Monitoring System (NALCMS). Land Cover 30m, 2015 (Landsat and RapidEye). Retrieved from the Commission for Environmental Cooperation (CEC) website: http://www.cec.org/north-american-environmental-atlas/land-cover-30m-2015-landsat-and-rapideye/ | |
| Notes | The extent of this dataset covers the eastern portion of the Capital Regional District (CRD) on Southern Vancouver Island. Some incorrect land classification is corrected for. | |
| Land Cover Classification | | |
| Value | Definition | Colour (RGB) |
| Value 1 | Temperate or sub-polar needleleaf forest | 0 61 0 |
| Value 5 | Temperate or sub-polar broadleaf deciduous forest | 20 140 61 |
| Value 6 | Mixed forest | 92 117 43 |
| Value 8 | Temperate or sub-polar shrubland | 179 138 51 |
| Value 10 | Temperate or sub-polar grassland | 225 207 138 |
| Value 15 | Cropland | 230 174 102 |
| Value 16 | Barren lands | 168 171 174 |
| Value 17 | Urban | 220 33 38 |
| Value 18 | Water | 76 112 163 |
| Value 20 | Garry oak and associated ecosystems | 206 15 254 |
