Data table metadata	
File name	Sensitive Ecosystem Inventory (SEI) Garry Oak Dominant and Co-Dominant Polygons
Date created	June 2020
Date last updated	05 August 2020
Geometry	Polygon
Number of records	534
Projection	EPSG:3005 - NAD83 - BC Albers
Data source	BC Government Sensitive Ecosystem Inventory (SEI). (2011).
Notes	The extent of this dataset covers southeastern Vancouver Island and the southern Gulf Islands. This dataset is not corrected for recent development.

Data table structure and attribute description				
Attribute name	**Definition**	**Unit**	**Type**	**Attribute description**
AREA	Area of the polygon.	meters squared	Real	Values: 568.82885913000 - 1256884.28074999992. E.g. 9222.23680526000
PERIMETER	Perimeter of the polygon.	meters	Real	Values: 102.16429823500 - 10243.82556190000. E.g. 639.01218011400
POLYGON_ID	SEI identification code of the polygon.		String	Numeric value for each polygon.
LOCATION	Descriptive location of the polygon.		String	Brief description of the polygon's location. E.g. W of Munns Rd at Fizzle Lake.

ECOSYSTEM1	Primary ecosystem type.		String	Values: CB = coastal bluff CB:cl = coastal cliff HT = herbaceous HT:ro = herbaceous rocky outcrop HT:ro:sh = herbaceous rocky outcrop >20% shrub cover HT:sh = herbaceous >20% shrub cover OF:co = older forest: coniferous, <15% deciduous OF:mx = older forest: mixed coniferous and deciduous, >15% deciduous RI:2:3b = riparian: herb dominated RI:3b:6 = riparian: shrub/herb dominated SG:co = older second growth forest: coniferous, <15% deciduous SG:mx = older second growth forest: mixed coniferous and deciduous, >15% deciduous SV:cl = inland cliff or bluff SV:sd = coastal sand dune WD = woodland WN:ms:sw:sp = wetland: marsh: shallow water: swamp WN:sp = wetland: swamp NULL = the original dataset did not record a primary ecosystem type.	
ECOSYSTEM2	Secondary ecosystem type.		String	Values: CB = coastal bluff CB:cl = coastal cliff HT = herbaceous HT:ro = herbaceous: rocky outcrop HT:ro:sh = herbaceous: rocky outcrop: >20% shrub cover OF:co = older forest: coniferous, <15% deciduous SG:co = older second growth forest: coniferous, <15% deciduous SG:mx = older second growth forest: mixed coniferous and deciduous, >15% deciduous SV:cl = inland cliff or bluff WD = woodland WN:ms = wetland: marsh NULL = the original data source did not record a secondary ecosystem type.	
DOMINANTS	Dominant and co-dominant species recorded in the polygon.		String	Values: AR = not defined in the source metadata AT = Trembling aspen BG = Grand fir FD = Douglas-fir QG = Garry oak MB - Bigleaf maple RA = Arbutus RMJ = not defined in the source metadata TW = Western yew WD = not defined in the source metadata NULL = the original data source did not record a dominant or co-dominant tree species.	

| COMMENTS | Comments on the polygon. | | String | |
